

In Vitro Diagnostic Reagent

Stain Solution-4DS

Used to stain blood cells so that their morphology and structure can be observed, enabling the blood analyzer to perform blood cell differentiation and counting

Product Photo

Product Model	Stain Solution-4DS
Packaging Specifications	42 mL, 28 mL
Product Code	p1093

Intended Use

Used to stain blood cells so that their morphology and structure can be observed, enabling the blood analyzer to perform blood cell differentiation and counting

Principle

White blood cells are stained with the aid of the stain solution for blood cell analysis and, in combination with the flow cytometric technique based on laser light scatter and fluorescence staining, the white blood cells are detected

Composition

Fluorescent dye
